Professional Experience

Contentsquare

Senior Engineering Manager
Engineering Manager

May 2025 – Present
Jan 2024 – Apr 2025

Tech Stack: Python, FastAPI, Dagster, PostgreSQL, Snowflake, dbt, AWS, Terraform, Docker, GitHub Actions

- Spearheaded a newly formed, geographically distributed department of 5 Engineers post-Hotjar acquisition — merging distinct engineering cultures, modernizing the data backend, and shipping high-leverage data products.
- **Post-Acquisition Integration:** Consolidated Hotjar's remote-first practices into Contentsquare by standardizing async documentation frameworks across 4 time zones, eliminating synchronous dependencies and cultural friction.
- **Scaled Business-Critical Backend & Data Platform:** Architected and scaled a zero-downtime system orchestrating 10,000 data assets across a 20TB estate — powering global reporting, sales commission payouts, PQL computation, and automated retention orchestrators.
- **Built Self-Serve Systems:** Shipped a secure internal API and data access layer enabling non-technical stakeholders to safely self-serve the main data warehouse, eliminating engineering bottlenecks.
- **Drove Engineering Velocity:** Overhauled CI/CD practices, automated testing frameworks, and deployment workflows — increasing deployment frequency by 40% and Q-o-Q initiative delivery by 20%.
- **Cultivated High-Performing, Resilient Teams:** Hired with a 100% probation pass rate; maintained 100% retention across a fully distributed team through documentation-first operations, blameless post-mortems, and psychological safety.

Data Engineer II
Data Engineer I

Jan 2023 – Dec 2023
May 2022 – Dec 2022

- Built the reliable data backend underpinning internal system unification — designed and shipped scalable ELT pipelines in Python and FastAPI that enabled product-led growth across the organization.
- Established a product-oriented engineering operating model, delivering internal tooling that eliminated data scientist and analyst dependencies on the engineering team.
- Migrated legacy infrastructure (Redshift, scripted ETLs, cron) to modern, cost-efficient cloud architectures, reducing operational overhead and improving pipeline reliability.
- Instituted engineering standards from scratch: comprehensive unit/integration test suites and CI/CD pipelines across all backend services.

PwC France

Data Engineer

Feb 2021 – Apr 2022

Tech Stack: Python, SQL, Azure, PostgreSQL, React

- Consultant within the Data Assurance team, architecting technical solutions for enterprise clients.
- Built an end-to-end data platform from scratch (ingestion, backend transformations, cloud logic) for a global cement association.
- Acted as Co-Product Owner and full-stack engineer for internal ESG and risk assessment web applications for major banking and enterprise clients.

Panodyyssey

Software Engineer

Mar 2020 – Aug 2020

Tech Stack: Python, Beautiful Soup, Scrapy, Node.js, Linux

- Designed and implemented the core content ranking backend algorithm and built automated web-scraping pipelines, resulting in a 30% increase in user acquisition.

Education

ESILV (Ecole Supérieure d'Ingénieurs Léonard de Vinci)
Master of Engineering – Mathematics and Computer Science

2017 – 2021

Griffith College Dublin
Computer Science (Study Abroad Semester)

2020 – 2021
